

ABSTRACT

Scheduler displays week view by default. To change the current view, define the applicable view name to the currentview property. The applicable view names are

- Week
- Day
- Workweek
- Month
- Year

Introduction:

Each view types available in scheduler are maintained as individual modules and to work with those views, it is necessary to inject the required modules. The following modules are available in scheduler namely

- Day - Inject this module to work with the day view.
- Week - Inject this module to work with the week view.
- WorkWeek - Inject this module to work with the work week view.
- Month - Inject this module to work with the month view.
- Agenda - Inject this module to work with the agenda view.
- MonthAgenda - Inject this module for displaying month agenda view.
- TimelineViews - Inject this module to work with the timeline day, timeline week, timeline work week view.
- TimelineMonth - Inject this module to work with the timeline month view.

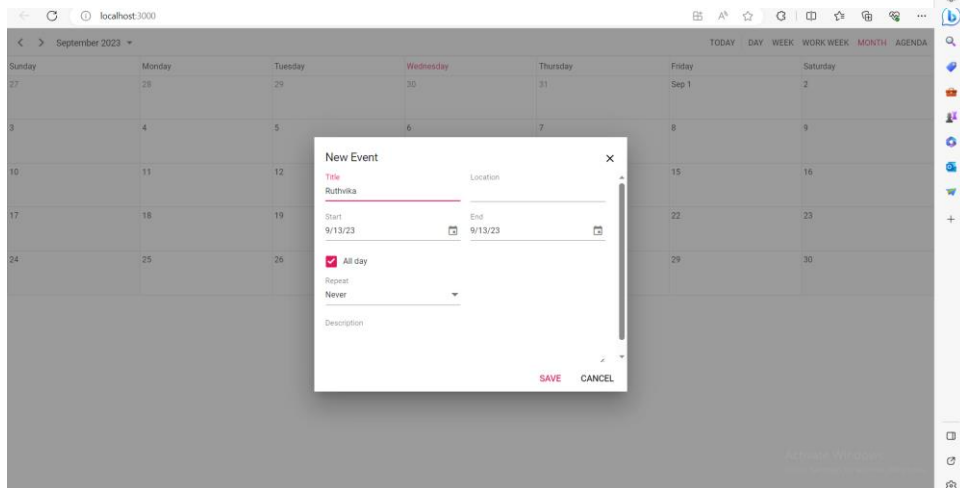

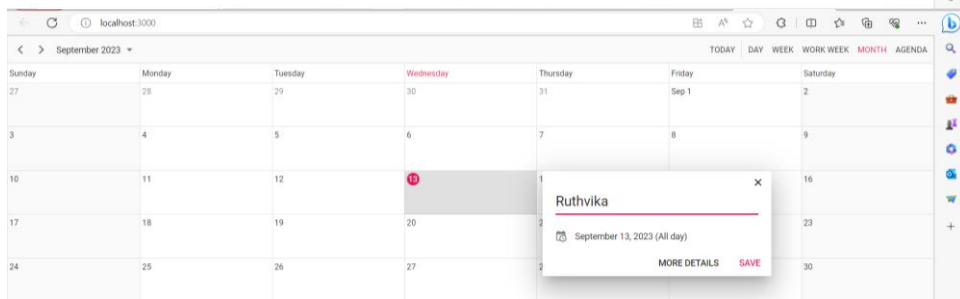

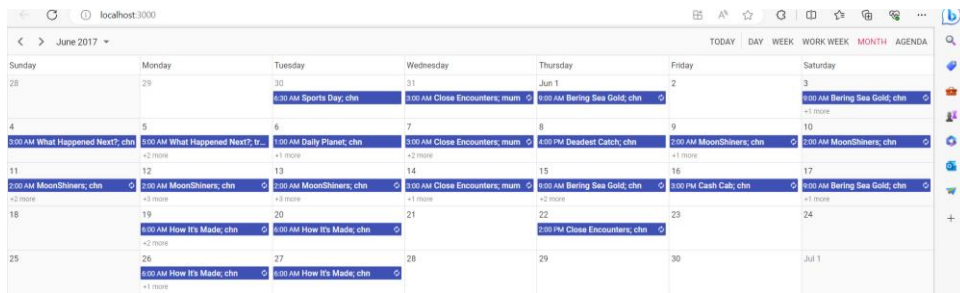

Technologies Stack:

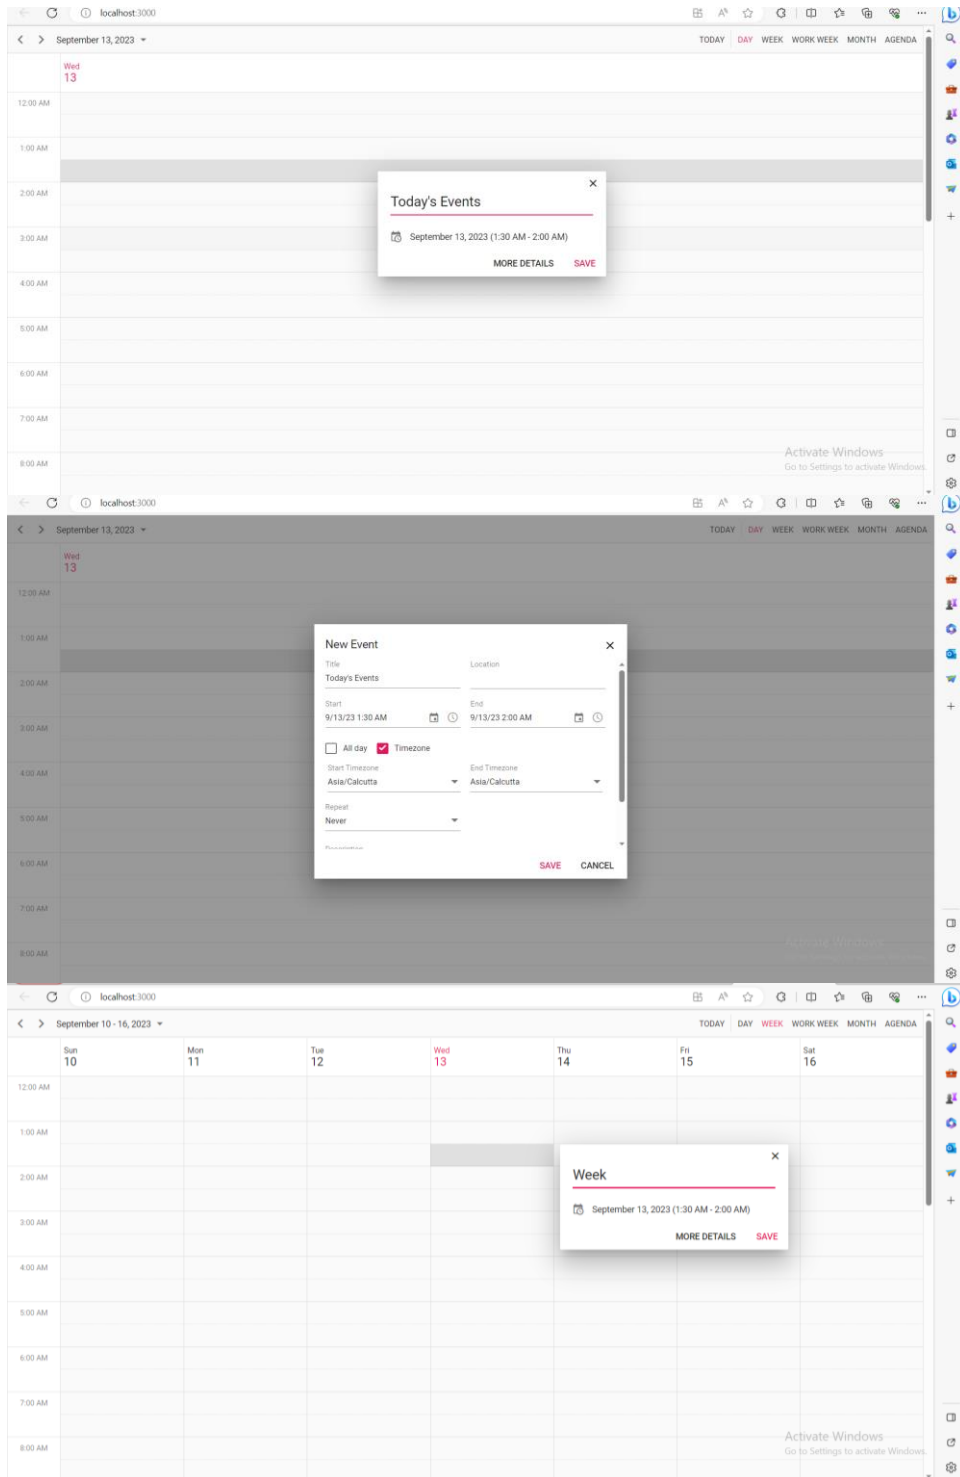

OS – Windows 10
